Description

50bp DNA ladder is ideal for determining the size of double-stranded DNA from 50 to 500 base pairs. The ladder consists of 8 linear double-stranded fragments .The **250bp** fragment is present at increased intensity to allow easy identification. All fragments are precisely quantified and mixed during the production. For 5 ul loading, all fragments except 250bp are 40ng. The 250bp fragment is 100ng. This ladder is pre-mixed with loading dye and is ready to use.

Recommendations

Do not heat before loading.

For quantification, adjust the concentration of the sample to equalize it approximately with the amount of DNA in the nearest band of the ladder. Visualize DNA by staining with ethidium bromide or with SYBR® Green I.
